Question		Answer/Indicative content	Marks	Guidance
	e	<p>Mark Band 3–High Level (9-12 marks) The candidate demonstrates a thorough knowledge and understanding of storing and retrieving data from hash tables and linked lists. The material is generally accurate and detailed.</p> <p>The candidate is able to apply their knowledge and understanding directly and consistently to the context provided. Evidence / examples will be explicitly relevant to the explanation.</p> <p>The candidate is able to weigh up both sides of the argument which results in a supported and realistic judgment as to which data structure is suitable.</p> <p>There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.</p> <p>Mark Band 2-Mid Level (5-8 marks) The candidate demonstrates reasonable knowledge and understanding of storing and retrieving data from hash tables or linked lists; the material is generally accurate but at times underdeveloped.</p> <p>The candidate is able to apply their knowledge and understanding directly to the context provided although one or two opportunities are missed. Evidence / examples are for the most part implicitly relevant to the explanation.</p> <p>The candidate makes a reasonable attempt to come to a conclusion showing some recognition of influencing factors that would determine which data structure is suitable.</p> <p>There is a line of reasoning presented with some structure. The information presented is in the most part relevant and supported by some evidence.</p> <p>Mark Band 1-Low Level (1-4 marks) The candidate demonstrates a basic knowledge of storing and retrieving data from hash tables or linked lists; the material is basic and contains some</p>	12 AO1.1 (2) AO1.2 (2) AO2.1 (3) AO3.3 (5)	<p>Searching of a Linked list involves starting at the first node and following the pointers until either the desired value is found, or the end of the list is reached, meaning the item isn't in the list.</p> <p>The bigger the linked list grows, the longer it takes to search. If a linked list doubles in size it will, on average, take twice as long to search. A list of size n takes on average $n/2$ checks. In Big O this is $O(n)$, or linear complexity.</p> <p>Searching of a hash table requires the key to be hashed and the correct location accessed. The time this takes is largely dependent on the time to create the hash. If we ignore collisions, the time to find an item will stay the same regardless of the size of the white list. In other words it has $O(1)$ or constant complexity. Unfortunately as the white list grows collisions become more likely. Linear probing and chaining means that once a location has been found the time taken grows linearly with the number of collisions that have occurred for that location,</p> <p>Nonetheless this is still going to perform significantly better than a linked list.</p> <p>If items are added to the end of the linked list then if the location of the last node is stored, that location can be ready made to point at the new item. The time to add items is constant.</p> <p>If they are added in some sort of order then the time to add items grows linearly due to the time spent searching for the right position. (Storing in order has the advantage that it is if an item isn't in the list this can be deduced once its location is passed, rather than waiting until the end.)</p> <p>Adding items to a hash table involves hashing the key and placing it in the correct location. This takes a constant amount of time.. ..unless there are collisions then there is</p>

Mark Scheme

Question			Answer/Indicative content	Marks	Guidance
			<p>inaccuracies. The candidate makes a limited attempt to apply acquired knowledge and understanding to the context provided.</p> <p>The candidate provides nothing more than an unsupported assertion.</p> <p>The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.</p> <p>0 marks No attempt to answer the question or response is not worthy of credit.</p>		<p>an overhead which grows with the number of collisions for that location.</p> <p>Overall a hash table is likely to be the best option (assuming it has enough space and a good hashing algorithm which produces a hash quickly and with few collisions). It will give very consistent performance even as the whitelist grows.</p> <p><i>NB Big O Notation isn't necessary for full marks as it is paper 2 content (though many of the more able candidates are likely to include it). The question is assessing candidate's knowledge of traversing and adding to the two data structures and their ability to analyse this to determine their suitability for the scenario.</i></p> <p><u>Examiner's Comments</u></p> <p>Candidates were assessed on the quality of their extended response in this question. Most candidates correctly cited direct access as the main advantage of hash tables and access times as the disadvantage of linked lists. The level of discussion varied with most candidate responses being given Level 2.</p>

Question			Answer/Indicative content	Marks	Guidance
10	a		5E	1 AO1.2	<u>Examiner's Comments</u> Although this question was well answered by most candidates, in some cases, incorrect workings rendered an incorrect hexadecimal answer. Candidate should be reminded to double check their workings.
	b		155 (1 mark for first two digits, 1 mark for final digit)	2 AO1.2	<u>Examiner's Comments</u> A relatively high proportion of candidates presented their answer to this question in binary as opposed to denary, hence, losing credit. Candidates should be reminded to read the question carefully.
	c		11010111 (1 Mark for the left most 1, 1 mark for the remaining 7 bits)	2 AO1.2	<u>Examiner's Comments</u> Some candidates demonstrated confusion between sign and magnitude and two's complement binary representation of negative number.
	d		<div style="text-align: center;"> 1121 022022 01001001- <u>00101111</u> <u>00011010</u> </div> 1 mark for correct answer 1 mark for valid method	2 AO1.2	<u>Examiner's Comments</u> Many candidates achieved full marks on this question. Those who did not, generally did not show evidence of binary subtraction. Converting the binary numbers to denary, carrying out the subtraction and converting the result back to binary does not evidence binary subtraction.
	e		– Exponent is 3 – Mantissa becomes 0100.11 – Which is 4.75. (accept $4\frac{3}{4}$) (1 per -, max 3)	3 AO1.2	<u>Examiner's Comments</u> This question was better attempted than similar questions in previous series. Most candidates clearly demonstrated the 'floating' of the point the correct number of places.

Question			Answer/Indicative content	Marks	Guidance
	f		<ul style="list-style-type: none"> – In fixed point is 1010.11 – Mantissa becomes 1.01011 – Exponent of 3 / 11 – Giving answer of 101011 011 (1 per -, max 4)	4 AO1.2	For MP3 any number of leading 0s is valid (including none) <u>Examiner's Comments</u> Many candidates did not convert the original denary number to the correct fixed-point binary representation. Others who did convert to fixed point correctly did not go on to represent their floating-point solution in as few bits as possible.

Question		Answer/Indicative content	Marks	Guidance
11	a	<p>Mark Band 3–High Level (7-9 marks) The candidate demonstrates a thorough knowledge and understanding of the technologies required for web development. The material is generally accurate and detailed.</p> <p>The candidate is able to apply their knowledge and understanding directly and consistently to the context provided. Evidence / examples will be explicitly relevant to the explanation.</p> <p>The candidate provides a thorough discussion which is well balanced. Evaluative comments are consistently relevant and well-considered.</p> <p>There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated.</p> <p>Mark Band 2-Mid Level (4-6 marks) The candidate demonstrates reasonable knowledge and understanding of the technologies required for web development; the material is generally accurate but at times underdeveloped.</p> <p>The candidate is able to apply their knowledge and understanding directly to the context provided although one or two opportunities are missed. Evidence / examples are for the most part implicitly relevant to the explanation.</p> <p>The candidate provides a sound discussion, the majority of which is focused. Evaluative comments are for the most part appropriate, although one or two opportunities for development are missed.</p> <p>There is a line of reasoning presented with some structure. The information presented is in the most part relevant and supported by some evidence.</p> <p>Mark Band 1-Low Level (1-3 marks) The candidate demonstrates a basic knowledge of the technologies required for web development; the material is basic and contains some inaccuracies. The candidate makes a limited attempt to apply</p>	<p>9</p> <p>AO1.1 (2)</p> <p>AO1.2 (2)</p> <p>AO2.1 (2)</p> <p>AO3.3 (3)</p>	<p>HTML...</p> <p>...they understand how to write (i.e. define the structure of) web pages.</p> <p>CSS..</p> <p>... they understand how to define the formatting of websites.</p> <p>JavaScript...</p> <p>...they understand how to write client side code</p> <p>...allowing them to add interactivity to the website</p> <p>Understanding of HTML/CSS and JavaScript is essential for the role. Without knowing HTML it is impossible to handcode webpages.</p> <p>Whilst WYSIWYG tools exist these often produce inefficient code and at any rate it will be necessary at some point to hand tweak the code. <i>(As the role is 'programmer' it is reasonable to expect that the site will be coded.)</i></p> <p>CSS is nearly as essential. Whilst HTML can be used for a lot of the formatting, this is considered bad practice. CSS will allow them to make consistent looking sites.</p> <p>JavaScript is also essential as most websites have an interactive element (e.g. validation of forms)</p> <p>Knowledge of Server-side processing / PHP/ASP etc...</p> <p>...allowing them to write dynamic websites.</p> <p>This is important if the company wants to produce websites with content that changes</p> <p>Databases...</p> <p>...allowing them to allow websites to store and retrieve data.</p> <p>Some knowledge of databases will be useful if writing dynamic sites. This will largely be focussed around SQL.</p> <p>Photo editing...</p> <p>...allowing them to prepare images for the website.</p> <p>This is less essential as in many cases the</p>

			<p>acquired knowledge and understanding to the context provided.</p> <p>The candidate provides a limited discussion, which is narrow in focus. Judgments if made are weak and unsubstantiated. The information is basic and communicated in an unstructured way. The information is supported by limited evidence and the relationship to the evidence may not be clear.</p> <p>0 marks No attempt to answer the question or response is not worthy of credit.</p>		<p>assets will be pre-prepared. A basic knowledge (e.g. resizing would be expected).</p> <p>Knowledge of software engineering practices... ...allowing them to work as part of a team when building the website. The importance of this will depend on the size of the team working on the site.</p> <p>May mention more advanced technologies e.g. AJAX, SOAP, JSON etc.</p> <p><u>Examiner's Comments</u></p> <p>Candidates were assessed on the quality of their extended response in this question. Most candidates correctly cited HTML, CSS and JavaScript as the basic technological requirements. The level of discussion varied with many extending their response to include other appropriate technologies. This question was generally well answered by most candidates.</p>
	b		<ul style="list-style-type: none"> – The head contains information about the page and needed to set the page up – Orville's Oranges is displayed in the title bar / tab of the page. – The page is linked to the style sheet mainStyle.css <p>(1 per -, max 2)</p>	<p style="text-align: center;">2 AO3.3</p>	<p><u>Examiner's Comments</u></p> <p>Explanations were, in many cases too superficial for this level of study. See exemplar 2 which shows the level of detail required in the explanation to gain credit.</p> <p>Exemplar 2</p> <p>' The title on the browser tab of the HTML page will be Orville's Oranges.</p> <p>• The HTML file is linked to a CSS file called "mainStyle.css" [2]</p>

Question			Answer/Indicative content	Marks	Guidance
	c		<pre> .offer{ border-style: solid; border-color: orange; } </pre>	<p>2 AO3.2</p>	<p>Accept div. offer Accept hex / RGB codes that would provide a shade of orange. Closing ; is optional</p> <p><u>Examiner's Comments</u></p> <p>It was evident that some candidates did not have the required awareness of the CSS class and property definitions outlined in the specification appendix 5d. Those candidates who did, generally scored well on this question.</p>
